Concerns/Thoughts

- Many teens do not believe e-cigs contain nicotine
- Many believe it is just flavoring
- Early e-cigarette use and nicotine addiction can harm brain development and increase the risk of young people smoking cigarettes
- Youth e-cig use increased 10 fold from 2011-2015 (CDC)
- Teenagers should be inhaling air, not products with toxins in them

Electronic Nicotine Delivery Systems (ENDS)

- Vaporizers, vape pens, hookah pens, electronic cigarettes, e-pipes, mods, juuls, etc.

E-cigarettes

- According to the FDA, electronic cigarettes are **battery-operated devices** that turn **nicotine or other chemicals into a vapor** that is inhaled by the user
- Use on the rise among teens
- Easy to conceal other drug use
- Liquid nicotine = potential hazard
- “Vaping” or using “Dabs”
- Vaping Pens...

The electronic cigarette

It may look like a cigarette and deliver a dose of nicotine, but that's where the similarity ends.

Red **LED** glows when user draws gas from the device.

Rechargeable **battery**

A **sensor** turns on the device when it detects a drop in pressure as the user pulls air from the end . . .

. . . triggering the **atomizer**, which converts stored liquid into a warm fog.

The replaceable **mouthpiece/reservoir** contains a liquid consisting of propylene glycol, glycerine, nicotine and flavorings.

An FDA study found that e-cigarettes release carcinogens and toxic chemicals. However, they might be safer than regular cigarettes because they don't release tar, carbon monoxide, hydrogen cyanide and other poisons found in cigarette smoke.

Sources: Tobacco Control, FDA

PATTERSON CLARK/THE WASHINGTON POST

What is in e-cigarette aerosol?

- The e-cig aerosol that users breathe from the device and exhale contains harmful substances, including:
 - **Nicotine**
 - Ultrafine particles that can be inhaled deep into the lungs
 - **Flavoring such as diacetyl, a chemical linked to a serious lung disease**
 - Volatile organic compounds (VOCs)
 - **Cancer-causing chemicals**
 - Heavy metals such as nickel, tin, and lead

E-cig use and teens

- Use among middle and high school students tripled from 2013-2014
- High School
 - 4.5% to 13.4%
 - 660,000 – 2 million
- Middle School
 - 1.1% to 3.9%
 - 120,000 – 450,000

Teen Vape Use

- 36% of 12th graders had tried some form of vaping in 2017
 - Compared to 4% of 12th graders smoked cigarettes in 2017
- 10% of 8th graders
- 14% of 10th graders

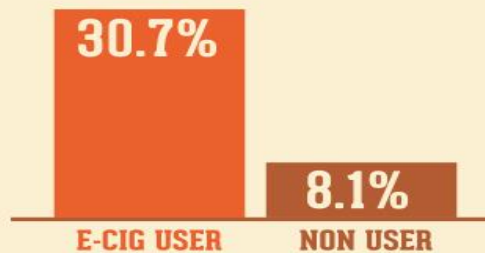

ENDS and Teen Use

- **More than 3 million** middle and high school students were current users of e-cigs in 2015
- In 2014, **81% of current youth e-cig users** cited the availability of appealing flavors as primary reason for use
- How do they obtain:
 - Visa gift cards  Amazon Account = Purchase
 - eBay gift cards

TEEN E-CIG USERS ARE MORE LIKELY TO START SMOKING.*²

Start Smoking Within 6 Months

*Includes combustible tobacco products [cigarettes, cigars, and hookahs]

WHAT DO TEENS SAY IS IN THEIR E-CIG?³

Manufacturers don't have to report e-cig ingredients, so users don't know what's actually in them.

What does it look like?

Feds crack down on e-liquid packaging that looks like candy, juice boxes

May 1, 2018

Federal regulators warned 13 companies that the way they market liquids used in cigarettes could entice dangerous ingestion by small children. (U.S. Food and Drug Administration)

Warning

- Endangering children by **marketing e-cig liquids to resemble kid-friendly products**... juice boxes, candy and whipped cream
- Packaging of the products — some cartoonlike images — could **mislead children** into thinking toxic liquids are ok to eat and drink

Behind the JUUL

The information below offers a description of the parts of a JUUL.

JUULpod: Contains flavored nicotine liquid, equal to approximately one pack of cigarettes. Functions as mouthpiece.

Circular Indicator: Glows to reflect charge level. Double tap on device to show charge level.

Magnetic USB: Fully charges JUUL in approximately one hour.

HOW DOES IT WORK?

START WITH YOUR JUULPOD

Remove colored cap & insert cartridge end into device. Voila - it becomes your mouthpiece as well as the flavorful engine that powers JUUL.

No buttons or switches, just draw to get it going - carefully at first, it may seem strong to first-timers.

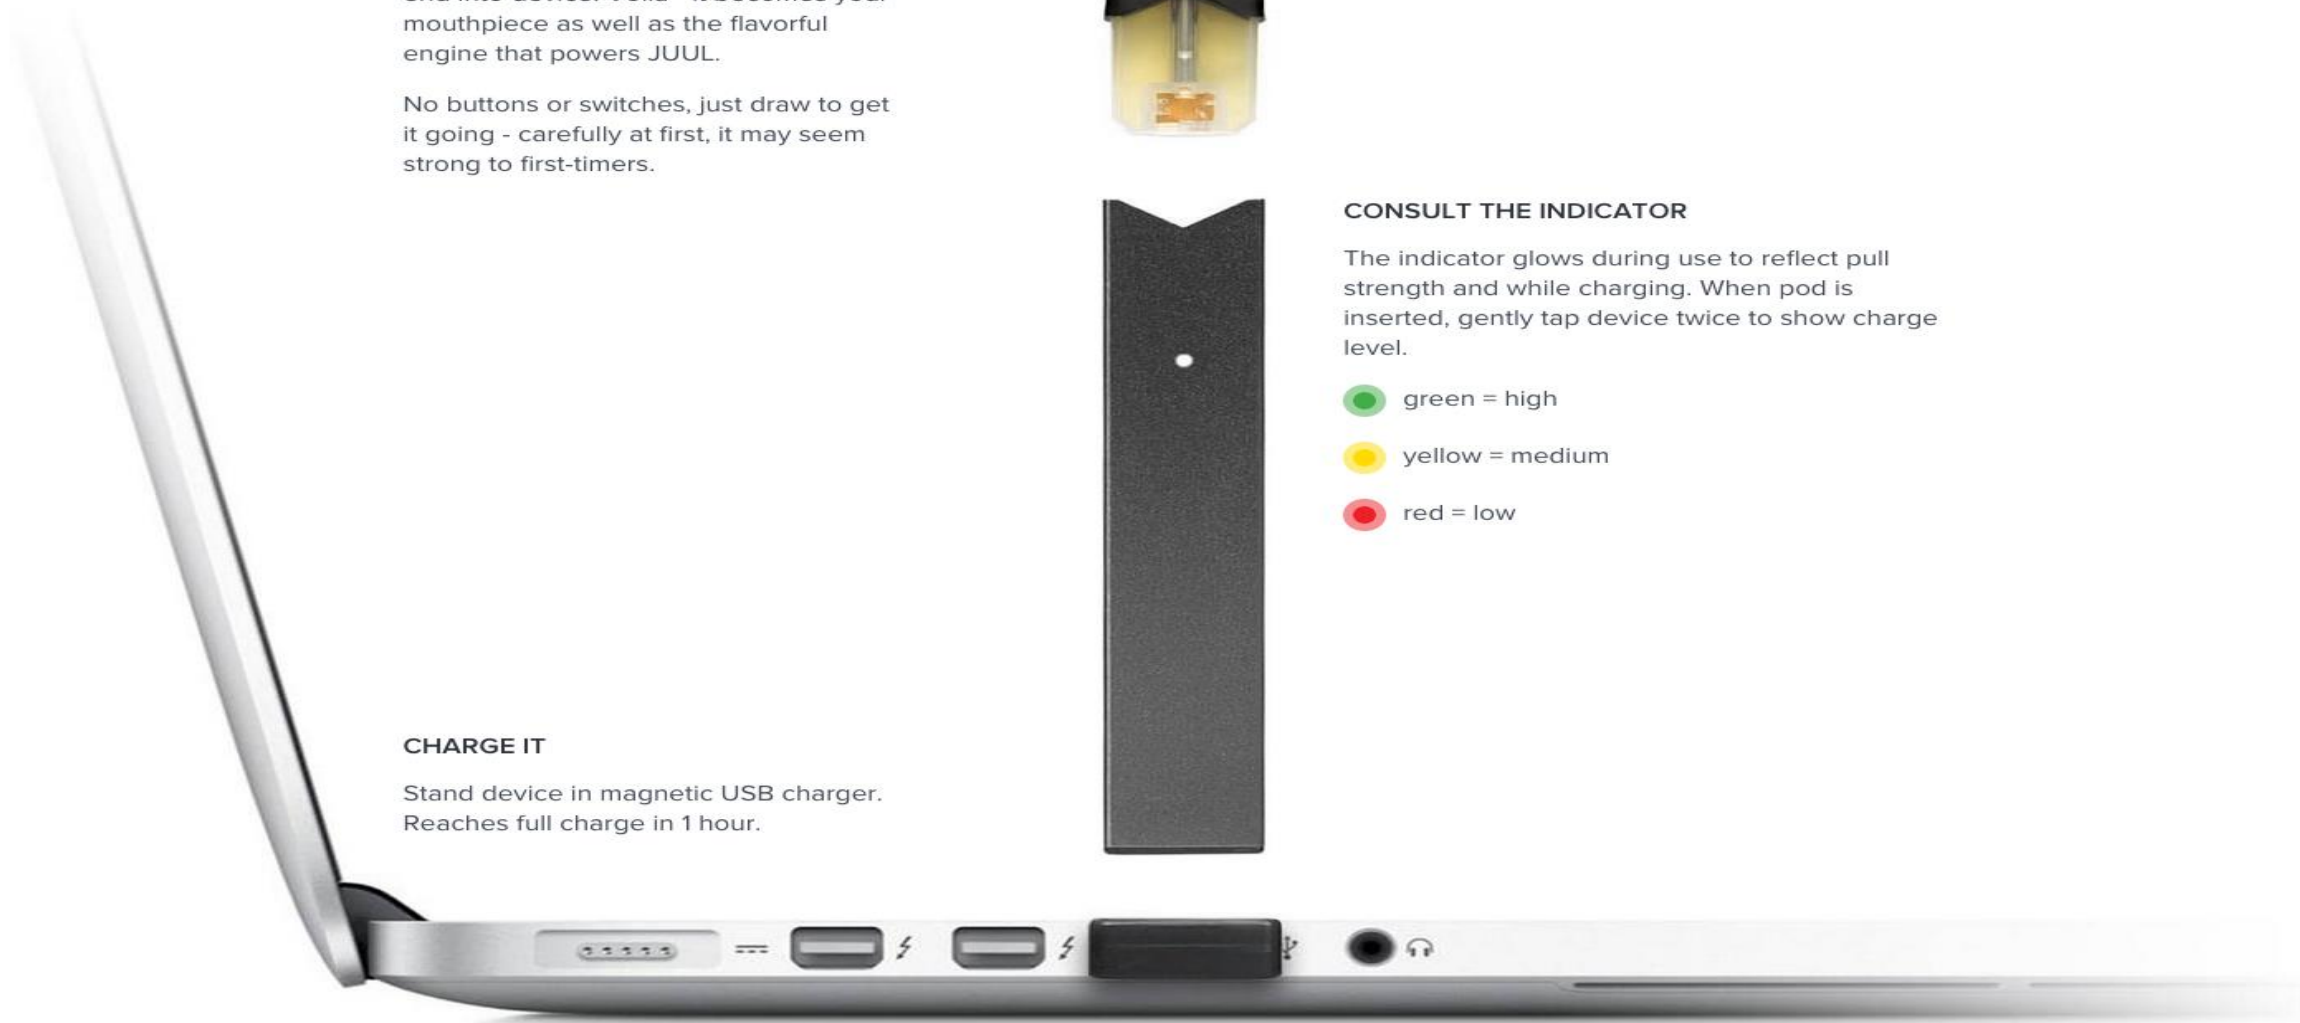

CONSULT THE INDICATOR

The indicator glows during use to reflect pull strength and while charging. When pod is inserted, gently tap device twice to show charge level.

-  green = high
-  yellow = medium
-  red = low

CHARGE IT

Stand device in magnetic USB charger. Reaches full charge in 1 hour.

Phix Vape Kit

- The ultra-portable revolution is in full swing, and the pod based Phix system by **Major League Vapers** makes a good case for why it should be your ultra-portable of choice!

Phix vs. Juul

- Phix
- 6 flavors
- 5% nicotine content
- One pod = 400-450 puffs
- Easy to use
- Discreet

VS

- Juul
- 8 flavors
- 5% nicotine content
- One pod = 200 puffs
- Easy to use
- Discreet
- Cheaper

Burned Florida Man Was Killed by Exploding Vape Pen

By [James Tennent](#) On 5/17/18 at 8:18 AM

- A man in Florida **died when his vape pen exploded, firing two pieces of the device into his head before his house set on fire, leaving his body heavily burned**, (medical examiners report has said)
- The death is thought to be the 1st in the U.S. directly related to the use of one of the popular devices
- Individual died from a **“projectile wound of head”** and 80 percent of his body suffered burns in the subsequent fire
- The device was manufactured by Smok-E Mountain, with *The New York Times* reporting that the company’s logo appeared on one of the object found in D’Elia’s cranium

5 Tips to help avoid vape battery explosions

1. Consider using vapes with safety features

such as firing button locks, vent holes, and protection against overcharging.

2. Keep your vape covered.

Don't let it come into contact with coins or loose batteries in your pocket.

3. Never charge your vape with a phone or tablet charger.

Always use the charger that came with it.

4. Don't charge your vape overnight

or leave it charging unattended.

5. Replace the batteries if they get damaged or wet.

If your vape gets damaged and the batteries are not replaceable, contact the manufacturer.

Poisons

- “E-liquids,” are a mix of nicotine, flavors and other ingredients
 - Ingesting them can cause nicotine poisoning and even death for small children
- Between January 2012 and 2017 there were **more than 8,200 e-cig and liquid nicotine exposures** among children younger than 6

Teens inhale cancer-causing chemicals in e-cigs Fruit flavors have the most chemicals, study finds

- **Thirty-one percent of the students cited the availability of flavors**, such as mint, candy, fruit or chocolate, as a reason for e-cigarette use
- Research shows that young people are **more likely to try flavored e-cigs and believe that they are less harmful** than tobacco-flavored ones

What is propylene glycol in E cigarettes?

- **Propylene Glycol** is the chemical used to create the visual smoke seen when vaping an electronic cigarette
- The **Propylene Glycol** (PG) is added to the liquid nicotine, water, and flavorings used while making e juice (sweet taste)
- Heated creates the vapor and potential hazards of lung irritants
 - Contributes to “popcorn lung” with diacetyl (an artificial flavor with a buttery taste)

Electronic Cigarettes and Liquid Nicotine Exposures - AAPCC

Year	Number of Cases
2011	271
2012	460
2013	1,543
2014	4,024
2015	3,774
2016	2,886
2017	2,450
2018 (thru Sept)	2,226

**More than half of these reported exposures have occurred in
young children under the age of 6**

Types of tobacco and liquid nicotine-related exposures reported to poison centers:

- *A child swallows a cigarette butt he found on the ground*
- *An adult accidentally rubs liquid nicotine into her eyes after refilling an e-cigarette cartridge*
- *An adolescent experimenting with smokeless tobacco swallows a mouthful of the product*
- *A child tastes liquid nicotine because it has a pleasant smell*

Warning – Which is Which?

Dab Pen

- **A vaporizer pen specifically designed to vape cannabis concentrates**
- A regular dab pen comes with atomizers, coils for heating the material and mouthpiece, which you inhale through to get the vapor
- **Dab pens** come in all shapes and sizes, and their diversity and availability contribute to their popularity

Wax Pen Starter Kits

Pens and containers

Wax, Dabs, Goo, Honey,
Shatter, Budder, BHO

Butane Honey Oil (BHO)

Dabs, Wax, Budder, Shatter

- Similar to oils, but **more concentrated**; thus greater high
- Cooked like meth; acts like meth: **psychotic breaks**
- **Passing butane through a tube packed with marijuana**
- Leaves extracted resin behind as a sticky, thick oil-like substance
- Risk of explosion
- **Up to 90% THC**

Potency

- 1960-1970s – 2-3% THC (leafy green)
- Today the oil or concentrate can be anywhere from **70-90% pure**
- Quicker high

RSO

Co2

Live Resin

Shatter

Bubble Hash

Crumble

Budder
/Earwax

Sugar Wax

The BHO Process

Wax cooks = “Boom!”

- Wax is to marijuana as freebasing is to cocaine or heroin and what the shake-and-bake method is to meth
- *Very, very* dangerous
- When using butane to make wax, its vapors can fill a room and ignite with the smallest of sparks, just like gas

BHO Explosions - video

WARNING

**The following video contains
content that may be disturbing to some.
Viewer discretion is advised**

CBI

Extremely dangerous for you, loved ones,
neighbors, the community

THC Extracts Vaping: How it Works

- Vaping wax with a **dab pen** or **e-Nail** is the gold-standard in using extracts because it induces a **clear, clean *high***, and does not produce any smoke
- **Marijuana wax and oil usually contains about 80% THC** compared to **top-shelf dry herb**, with a mere **20%**

<https://thevape.guide/vaping/extract/>

Crystalline THC

- **THCa Crystalline** was developed as a means of delivering **large, quantifiable doses of THCa** and is known as the purest isolate anywhere on the market testing at 99-100%

According to thevape.guide

- Vaporization implies vaporizers produce **little to no marijuana scent and no smoke**, though, as the name suggests, they do produce vapor that quickly dissipates
- Vaping THC concentrates produces a **stronger and purer high** than smoking does
 - “Vaping THC extract is the best method for users who value convenience, their health, and want the **purest high** available”

THC'S MANY FORMS

Smoking Marijuana

Dried flower buds from the cannabis plant

Smoking Cannabis or Hashish Oils

Made from resin extracted from the flower cluster and top leaves of the plant

Using a Vaporizer

Cannabis that's heated and vaporized, not burned

Marinol

FDA-approved medicine that contains synthetic THC

Edibles

Food, drinks, oils

Marijuana Edibles

Marijuana Edibles

Third Death in Colorado Linked to Marijuana Edibles

<http://www.foodsafetynews.com/2015/03/third-death-in-colorado-linked-to-edible-marijuana/#.VUqoaLctFdg>

- 1. Colorado dad pleads not guilty to shooting his wife dead in front of their three sons after 'hallucinating on pot candy' March, 2015**
 - Kristine Kirk, 44, was shot dead at her Denver home in April 2014. She was on the phone to 911 reporting her husband's 'scary' behavior. He was 'talking about the end of the world', she said to the dispatcher
- 2. Wyoming college student Levy Thamba Pongi, 19, who took a leap from a Denver hotel balcony after eating pot-infused cookies. "Marijuana intoxication" was listed by the coroner as a significant factor in his death.**
- 3. Luke Goodman, 23, killed himself Saturday, March 27, 2015 in a condo at Colorado's Keystone Ski Area. Goodman's family and friends suspect that edible marijuana was a factor in the self-inflicted gunshot death. His mother, Kim Goodman, blames her son's death on "a complete reaction to the drugs."**

Kristine Kirk and her children in an undated photo.
Kristine's parents and sister are now legal guardians of the children

Kirk's children have filed the nation's first wrongful-death lawsuit against a recreational marijuana company, claiming their father ate a pot-laced Karma Kandy Orange Ginger, a Tootsie-Roll-like chew, that triggered the April 14, 2014, shooting.

Then

- 1960-1970s – 2-3% THC (leafy green)
- **420** (chemicals, time to smoke, date to party)
- Smoked weed

Now

- 20-30% THC (leafy green)
- **710** (oil, concentrated w more chemicals)
- Vaped, smoked, edible, dabbing
- Might not smell it
- Looks like butter, honey, oil
- Synthetic: cooked with butane
 - **90% THC**
 - **Psychotic breaks**
 - **Violent behaviors**

BHO is 710 is Oil

710

OIL

THC

- **Tetrahydrocannabinol**
- Psychoactive ingredient in marijuana (**high**)
- Can cause paranoia or anxiety
- Mind altering
- Induce sleepiness

CBD

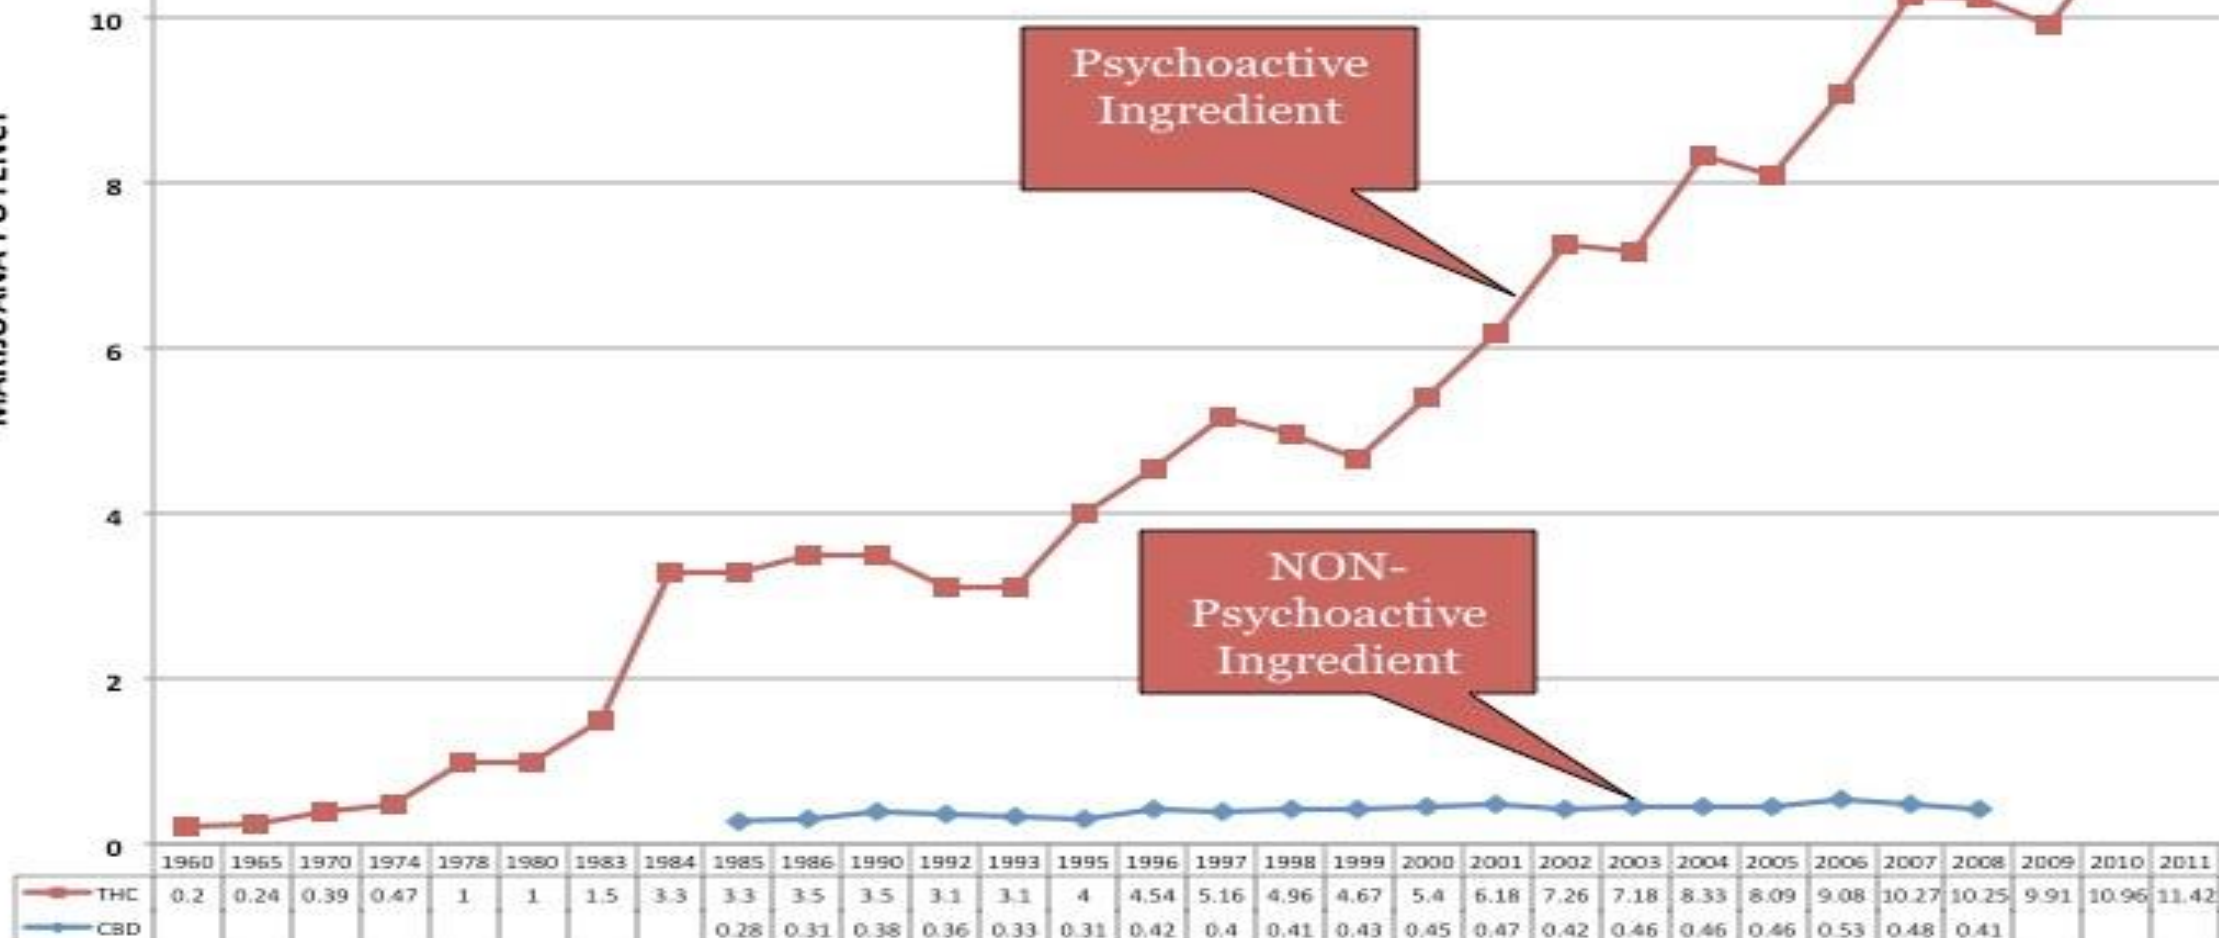

- **Cannabidiol**
- AKA: Medical Marijuana
- Non-psychoactive (**no high** – does not act on same receptors as THC)
- May reduce anxiety
- May have antipsychotic properties - reducing the psychosis-like effects of THC
- Promote wakefulness

Average **THC** and **CBD** Levels in the US: 1960 - 2011

Mehmedic et al., Potency Trends of D-9 THC and Other Cannabinoids in Confiscated Cannabis Preparations from 1993 to 2008, J Forensic Sci, September 2010, Vol. 55, No. 5. See <http://home.olemiss.edu/~suman/potancy%20paper%202010.pdf>.
