### Vascular Access Device

**A device inserted into a large vein used for medication, blood draws or intravenous nutrition. The vascular access device with catheter is secured under the skin and is difficult to pull out.**

#### EMERGENCY PLAN:

**The following actions should be taken if the catheter is pulled out:**

- 1. Put gloves on and apply direct pressure to the catheter site for 20 minutes and keep the child in the sitting position.**
- 2. Immediately notify EMS and parent/ guardians.**

**The following actions should be taken if the catheter is cut:**

- 1. Place clamp above the site of the cut.**
- 2. Wrap cut area in sterile gauze if available.**
- 3. Immediately notify EMS and parent / guardians**
