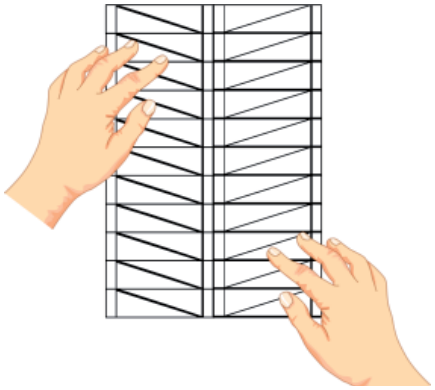
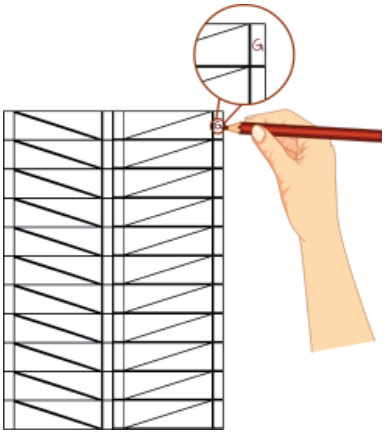
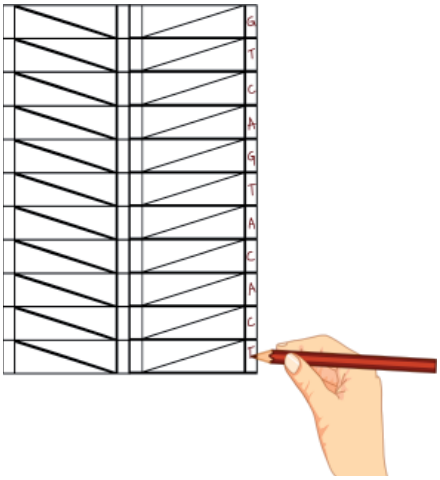
Using the blank DNA origami template



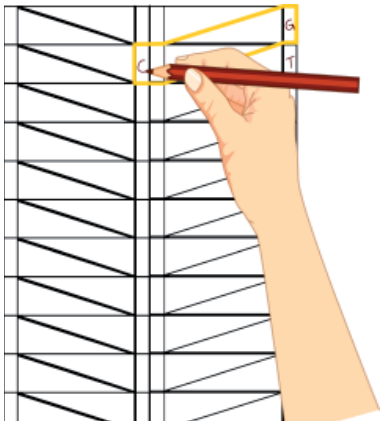
1. Lay out the blank DNA origami template on the table.



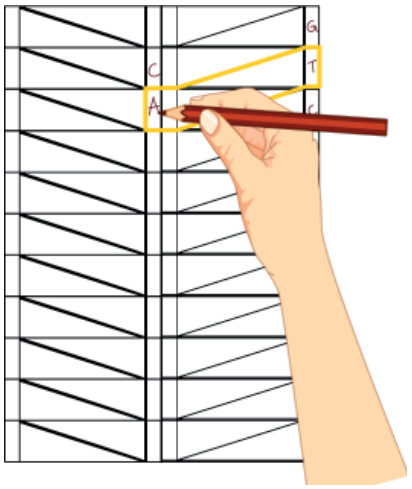
2. Start by writing the first letter of your DNA sequence (A,T, G or C) in the top right corner.



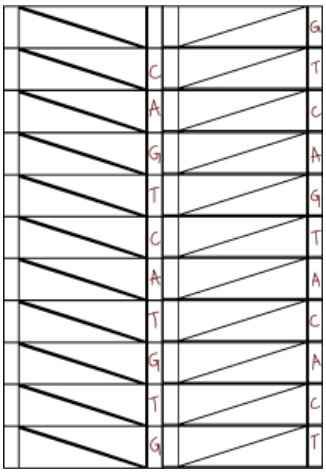
3. Continue your sequence down the column on the right.



4. Write the corresponding bases in boxes diagonally across from your sequence as shown.



5. Continue the complementary sequence until you reach the bottom; and fill in the top box of that column with any letter.



That's it! Now you are ready to colour and fold!
