What Teens Have Heard	"Makes a boring night fun."	"Legal, safe, not picked up in standard drug test."	"Keeps you amped up. You'll be the life of the party."	"Causes a trippy high with various plateaus."	"Enhances the senses and you'll love everyone."	"It's fake weed, legal, won't show up on a drug test."	"Full on euphoria, but super risky."	"A cheap, 20 minute high."	"Relaxing, not dangerous, and often easier to get than alcohol."	"Can keep you going for days."	"A free high, straight from the medicine cabinet."	"A great release of tension."	"Keeps you attentive and focused."	"Will guarantee a spot on the starting lineup."
Dangerous Because	Impairs reasoning, clouds judgment. Long term heavy drinking can lead to alcoholism and liver and heart disease	Thoughts of suicide, hallucinations, psychosis, hypertension, chest pain, violent behavior	Can cause heart attacks, strokes, seizures, and in rare cases, sudden death on the first use	Can cause abdominal pain, extreme nausea, liver damage	Can cause severe dehydration, liver and heart failure, and even death	Elevates heart rate and blood pressure, stored in the body for long periods of time, long-term effects not fully known	Skin infections, respiratory failure, death	Can produce significant damage to the heart, lungs, kidneys and brain. Can cause death	Can cause memory and learning problems, hallucination, delusions, and depersonalization	Can cause psychotic behavior (including paranoia, delusions, hallucinations, violent behavior), insomnia and stroke	Can cause severe respiratory depression that can lead to death - even after a single dose	Slows brain activity. Stopping use abruptly can cause a rebound effect leading to seizures and other harmful consequences	Abuse or misuse may result in dangerously high body temperatures and irregular heartbeat. Potential for heart attacks or lethal seizures	Can cause aggression, depression, heart attacks, strokes, liver cancer, sterility
Arizona Teen Facts (Grades 8-12)	Two thirds of high school seniors have used alcohol	Teen use of synthetic drugs is on the decline	Three and a half times as many teens have used cocaine as meth	8th graders are nearly as likely as high school seniors to abuse over-the-counter medicine, like cough medicine	MDMA use by teens has dropped 50% since 2010	There have been documented reports of teens being hospitalized in AZ after using spice	Heroin use among teens has continued to drop	8th graders are three times as likely to use inhalants as 12th graders	Marijuana is now the second most used drug among 10th and 12th graders	Meth use is at its lowest level since 2008	About one in seven high schoolers have abused prescription pain relievers	Teens report using Rx sedatives to get high	One out of 12 high school seniors abused prescription stimulants	Steroid use remains low at less than 1% of teenagers
Signs of Abuse	Slurred speech, lack of coordination, nausea, vomiting, hangovers	Agitation, hallucinations, lack of need to sleep	Nervous behavior, restlessness, bloody noses, high energy	Slurred speech, loss of coordination, disorientation, vomiting	Teeth clenching, chills, sweating, dehydration, anxiety, unusual displays of affection	Panic attacks, paranoia, giddiness	Track marks on skin, slowed and slurred speech, vomiting	Missing household products, a drunk, dazed or dizzy appearance	Slowed reaction time, impaired judgment and coordination, paranoia	Nervous physical activity, scabs and open sores, decreased appetite, inability to sleep	Rx bottles or pills missing, disrupted eating and sleeping patterns	Slurred speech, shallow breathing, sluggishness, disorientation, lack of coordination	Lack of appetite, trouble sleeping, restlessness, aggression	Rapid growth of muscles, opposite sex characteristics and extreme irritability
Important to Know	Children of alcoholics are at greater risk for developing alcoholism	In 2012 Arizona legislators banned "bath salts" but they are still available online.	Cocaine is one of the most powerfully addictive drugs	Dextromethorphan (DXM) is the ingredient that causes the "high"	Ecstasy can lead to depression and anxiety days or even weeks later	There is now a federal ban on the use of these products	Heroin is highly addictive and the purity of the drug cannot be accurately known	Many common household products are potential inhalants that can kill, either on the first use, or any time thereafter	Marijuana can be addictive and cause permanent damage to developing brains	Meth has a high potential for abuse and addiction, putting children at risk, increasing crime and causing environmental harm	Abusing Rx painkillers is just as dangerous, addictive, and deadly as using heroin	Using prescription sedatives with alcohol can slow the heart and respiration, and may lead to death	Many teens abuse prescribed medication to help them cram for exams or suppress their appetite	Teens who abuse steroids risk stunted growth
